

Add Two Numbers Using Bit Manipulation

[Problem](#)[Submissions](#)[Leaderboard](#)

RATE THIS CHALLENGE

You are given two integers A and B. Your task is to calculate their sum without using the + or - operators.

Use only bitwise operators to compute the result.

Input Format

A B

Constraints

$-10^9 \leq A, B \leq 10^9$

Output Format

Print a single integer representing the sum.

[Change Theme](#)

Language

Python 3

```
1 a,b=map(int,input().split())
2 while b != 0:
3     carry = a & b
4     a = a ^ b
5     b = carry << 1
6 print(a)
7
```

Line: 7 Col: 1
