

Maximum Ascending Subarray Sum 1

[Problem](#)[Submissions](#)[Leaderboard](#)

RATE THIS CHALLENGE

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

Input Format

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

Constraints

 $1 \leq n \leq 10^5$ $1 \leq arr[i] \leq 10^4$

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

```
5
10 20 30 40 50
```

Sample Output 0

```
150
```

Language

C

```
1  #include <stdio.h>
2  #include <string.h>
3  #include <math.h>
4  #include <stdlib.h>
5  int maxsubarr(int arr[],int n){
6      int currmax=arr[0];
7      int totalmax=arr[0];
8      for(int i=1;i<n;i++){
9          if(arr[i]>arr[i-1]){
10             if(arr[i]>currmax+arr[i]){
11                 currmax=arr[i];
12             }
13             else{
14                 currmax+=arr[i];
15             }
16             if(totalmax<currmax){
17                 totalmax=currmax;
18             }
19         }
20     }
21     return totalmax;
22 }
23 int main() {
```

```
24     int n,arr[10000];
25     scanf("%d",&n);
26     for(int i;i<n;i++){
27         scanf("%d",&arr[i]);
28     }
29     printf("%d",maxsubarr(arr,n));
30     return 0;
31 }
32
```
